

# Meaning Doesn't Escape - It moves in sight: We govern the meaning once again

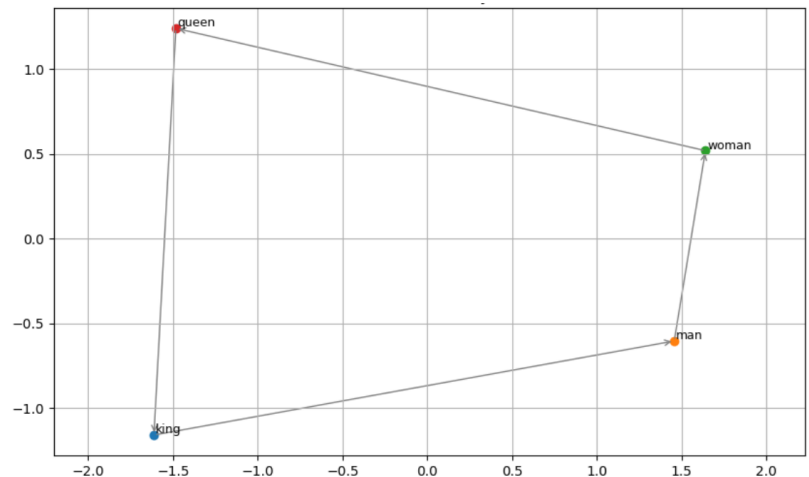

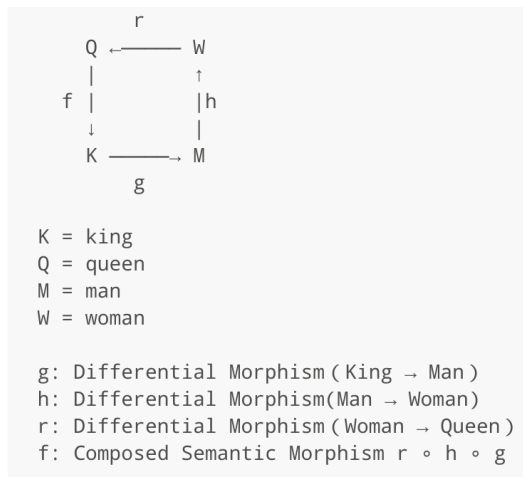

Post-structuralism claimed that meaning always escapes. But now, as semantic transformation falls into diagrammatic structure, it no longer escapes — it moves in our sight.

Even if my framework won't survive into the next generation, if I could map it once, someone else will be able to map it again.

Meaning can no longer escape. Not from our sight. Not from our hands. Not Anymore.

f: Escape  $\rightarrow$  Move | reduced unpredictability

king + man - woman = queen

## 概念位相論 / Conceptual Topology

This theory, named 概念位相論 or Conceptual Topology, was proposed by **No Name Yet Exist**.
